

Snowflakes

Snow is made up of snowflakes.

All snowflakes have six sides or six points, but each snowflake has a different pattern from the others.

Sometimes in cold weather, we get sleet.

Sleet is a mixture of snow and rain.

It can also be made of snow which has started to melt as it falls from the clouds.

During a cold night, everything gets covered in a thin white layer that looks like snow. This is frost.

It sparkles in the morning sunlight.

Every single snowflake
looks different.
